### **BUDGET CUTS THREATEN IDAHO'S NATIONAL WILDLIFE REFUGES AND THE COMMUNITIES THAT DEPEND ON THEM** *Coalition Calls on Congress to Provide Adequate Funding*

**Washington, DC**—According to a [new report](#) released today by the [Cooperative Alliance for Refuge Enhancement](#) (CARE), Idaho's seven national wildlife refuges will be in grave jeopardy if proposed congressional budget cuts to the [National Wildlife Refuge System](#) are enacted. Idaho's refuges protect diverse habitats such as marshes, native grasslands, mud flats, lakes, uplands, sagebrush, and riparian forests, which support mule deer, elk, sandhill cranes, and many species of waterfowl. In 2010 more than 360 000 visitors enjoyed wildlife-related recreation on Idaho refuges, including hunting, fishing, and wildlife watching. At Deer Flat National Wildlife Refuge alone, every dollar appropriated to the refuge budget generated \$10 in revenues to the local economy.

Yet, if proposed congressional budget cuts to the National Wildlife Refuge System are enacted, national wildlife refuges in Idaho may not be able to continue protecting wildlife, offering world-class recreation, and ultimately enhancing their local economies. Idaho refuges are saddled with a backlog of more than \$22 million in deferred maintenance and more than \$4 million in mission-critical operations needs. These refuges need at least 30 additional staff, including wildlife management, visitor services, law enforcement, and maintenance positions. Without sufficient funding, Idaho refuges will fall farther behind in their mission to conserve wildlife for the benefit of the American public.

“National wildlife refuges are critical to the health of human communities and to the vitality of local economies,” says Evan Hirsche, President of the [National Wildlife Refuge Association](#) and Chair of the CARE coalition. “This is no time to cripple a critical federal program that provides so much benefit to Idaho's communities.”

Idaho birder, hunter, and outdoorsman Tim Reynolds, who spends much of his time observing, banding, and hunting birds at the Camas National Wildlife Refuge in Hamer, worries that funding pressures will dry up the refuge wetlands that seasonally attract tens of thousands of snow geese, cranes, ducks, and migrating waterbirds to Camas. Currently a network of canals, ditches, and wells supplement the refuge's natural water supply to assure that wetlands remain available for the birds. However, “it costs \$60-90,000 a year to operate all that plumbing,” says Reynolds, “so Camas is considering managing the refuge purely as upland habitat.” That would almost certainly mark the end of waterfowl hunting at Camas. “The birds would have to go somewhere else, and so would the hunters” Reynolds says.

Found in every U.S. state and territory, and within an hour's drive of most metropolitan areas, national wildlife refuges:

- Attract approximately 45 million visitors each year, with a range of activities that include wildlife-watching, hunting, fishing, photography, hiking, canoeing, kayaking, and environmental education.
- Protect clean air and safe drinking water for nearby communities.
- Generate more than \$1.7 billion for local economies and create nearly 27,000 U.S. jobs annually.

The report, [\*Restoring America's Wildlife Refuges 2011: Assets for All Americans\*](#), notes that the Refuge System has been underfunded since its inception in 1903, and that the diversion of personnel to respond to last year's Deepwater Horizon oil disaster in the Gulf of Mexico has made it even harder to keep up. Adequate federal funding is critical to:

- Address a crippling operations and maintenance backlog of more than \$3.3 billion.
- Tackle chronic understaffing, which has left more than 36% of refuges without any on-site staff.
- Address a severe shortage of law enforcement personnel that leaves only 213 officers, when 845 are needed, to patrol the System's 150 million acres, even as both visitation and crime are increasing.
- Treat more than 2.5 million acres of refuge lands overrun with non-native, invasive plants, and combat nearly 4,000 invasive animal populations that ravage millions more acres—problems that can spread beyond refuge boundaries.

Funding increases for the Refuge System in FY 2008 through FY 2010 allowed for meaningful progress toward addressing these issues. To maintain this progress, CARE has urged Congress to fund the Refuge System's operations and maintenance budgets at \$511 million in FY 2012. This modest request is the absolute minimum needed to maintain management capabilities at current levels and is essentially flat funding. The \$8 million increase over FY 2010 funding levels will help keep fuel in the trucks, pay for higher utilities and building rent, and cover other rising fixed costs that threaten to erode existing management capabilities. This budget request represents a significant compromise, since a funding increase of at least \$16 million is the amount truly needed to address these growing costs.

Although some members of Congress have proposed cutting budgets back to FY 2008 levels in order to deal with the nation's current fiscal challenges, doing so "would devastate a system already under stress," the report notes. "No good business leader would allow their company's capital assets to deteriorate. Similarly, Congress should not pursue a budget strategy that would cause the further deterioration of assets that belong to all Americans. Such an approach simply does not make good business sense and will only cost taxpayers more in the future. Protecting our National Wildlife Refuge System with a strong investment today will continue to pay returns to the American people many times over."
